

*Herpetological
Review*

Volume 56, Number 4 – December 2025

Reptiles of Hidalgo, Mexico. CONABIO, Mexico City, Mexico. 763 pp.); however, reproduction and larval development may be extended until November. Although *D. eximius* is a species with a very marked annual reproductive pattern, there are factors that can affect larvae, such as changes in rainfall patterns and hydroperiod, pollution, predation, and microhabitat destruction. The availability of suitable sites for *D. eximius* to reproduce and develop has been decreasing every year (Piñon-Flores et al. 2021. J. Nat. Cons. 64:1617–1318).

For the past eight years (2017–2025), the development of *D. eximius* larvae has been monitored in San José “El Vidrio”, Municipality of Nicolas Romero, Estado de México, México (19.6455°N, 99.3831°W; WGS 84; 2644 m elev.). Día de Muertos festivities occur every year in the local cemetery, where *D. eximius* breeds (Osnaya-Becerril et al. 2022. Rev. Lat. Herpetol. 5:154–157), and *D. eximius* tadpoles develop in the containers or jars that are used as vases to decorate the site and subsequently accumulate rainwater (Fig. 1 A–C).

Once the Día de Muertos festivities are over, the flowers that were placed in the containers dry out or decay. This organic matter remains at the bottom of the containers until the rainy season begins, where, approximately one month after the first heavy rains, *D. eximius* returns to this site to reproduce and deposit eggs in the containers. Later, the tadpoles grow and develop by consuming this organic matter, the vegetation that may grow around them, and possibly microalgae. This event provides an opportunity for the species to survive in this locality, although *D. eximius* has been known to develop in temporary ponds in the same area (Tenorio-Mendoza et al. Herpetol. Rev. 55: 9–10).

Therefore, the use of these artificial shelters provides an opportunity for the larvae of *D. eximius* to complete their development. However, this also causes some individuals to prolong their development and be affected again with the Día de Muertos festivities, since people gather to alter the cemetery, by removing the grass, cleaning the containers, and placing new flowers, causing most of the remaining larvae to die. Therefore, it is important to involve the community in communicating the importance of the containers used by *D. eximius* tadpoles.

JANET ELIZABETH OSNAYA-BECERRIL (e-mail: janbio8685@gmail.com) and **MATÍAS MARTÍNEZ-CORONEL**, Departamento de Biología, Universidad Autónoma Metropolitana Iztapalapa, Av. San Rafael Atlixco 186, Col. Vicentina. Iztapalapa, CP: 0934, Ciudad de México, México; **ROBERTO TENORIO-MENDOZA** and **MÓNICA CRISTINA RODRÍGUEZ-PALACIO**, Departamento de Hidrobiología, Universidad Autónoma Metropolitana Iztapalapa, Av. San Rafael Atlixco 186, Col. Vicentina. Iztapalapa, CP: 0934, Ciudad de México, México (e-mail: cellbiologia@hotmail.com).

ELEUTHERODACTYLUS PLANIROSTRIS (Greenhouse Frog). **PREDATION.** *Eleutherodactylus planirostris* is a small (1–2 cm), terrestrial, direct-developing frog native to Cuba, the Bahamas, and the Cayman Islands (Dugo-Cota et al. 2019. Ecol. Lett. 22:884–893). The species was first recorded in Florida, USA, in 1863 as a non-native species (Cope 1863. Proc. Acad. Nat. Sci. Philadelphia. 15:43–54). Since its establishment, *E. planirostris* has spread throughout Florida (Mularo 2023. J. Herpetol. 57:381–389). *Anolis cristatellus* (Puerto Rican Crested Anole) is a small to medium-sized lizard (4–7 cm SVL) native to Puerto Rico and was introduced to Florida around 1975 (Schwartz and Thomas 1975. A checklist of West Indian amphibians and reptiles. Carnegie Museum of Natural History, Pittsburgh,

FIG. 1. A) *Anolis cristatellus* consuming an *Eleutherodactylus planirostris*; B) radiograph of the same individual, showing the skeleton of the consumed *E. planirostris*.

PHOTO BY KATHLEEN GRIFFIN

Pennsylvania. 75 pp.). *Anolis cristatellus* is a generalist predator of arthropods and small vertebrates (Walker et al. 2019. Anolis Newsl. VII: 96–300), including conspecifics (Campbell et al. 2018. Herpetol. Rev. 49:27–28). *Anolis cristatellus* and *E. planirostris* are commonly found in sympatry in south Florida (Clements et al. 2025. Ecol. Evol. 15:e71556). Here, we describe a successful predation event on an *E. planirostris* by a female *A. cristatellus* in South Florida.

At 1029 h on 4 July 2025, we observed an adult female *A. cristatellus* (ca. 38 mm SVL) consuming an *E. planirostris* ca. one meter from the ground on a tree trunk (Fig. 1A) at Fairchild Tropical Botanic Garden in Coral Gables, Florida (25.67679°N, 80.27146°W; ca. 1 m elev.). The *A. cristatellus* was captured three hours later (1331 h), and a radiograph confirmed a successful predation event and full ingestion of the *E. planirostris* (Fig. 1B). To our knowledge, this is the first recorded instance of predation on *E. planirostris* by *A. cristatellus*.

KATHLEEN GRIFFIN (e-mail: kgriffin48@gatech.edu) and **JONATHAN SUH**, Georgia Institute of Technology, Atlanta, Georgia 30332, USA.

EUPHLYCTIS ADOLFI (Adolf Skipper Frog). **DIET.** *Euphlyctis adolfi* is a common microglossid frog species distributed across South Asia and is known for its adaptation to both aquatic and semi-aquatic habitats. It is typically found in streams, riverbanks, marshes, paddy fields, and other wetland environments. In India, the species occurs widely across the North-Eastern states and the lower foothills of the Himalayas.

Here, we report the predation of an aquatic hemipteran, *Ptilomera assamensis*, by *E. adolfi*. An *E. adolfi* (36.1 mm total length), collected from a hill stream in Simoksongital village, South West Garo Hills District, Meghalaya, India (23.58234°N, 90.08986°E; WGS 84; 41 m elev.), was deposited in the National Zoological Collection, Zoological Survey of India, Shillong (Reg. No. V/A/NERC/ZSI/1972). During preservation, two appendages of an aquatic hemipteran were noticed protruding from the mouth of the specimen (Fig. 1). Upon making an incision in the abdominal region, a large, undigested, and intact *P. assamensis* was recovered (Fig. 2).

This observation provides new dietary information for *E. adolfi*, a species for which feeding habits have not been

SOCIETY FOR THE STUDY OF AMPHIBIANS AND REPTILES

www.ssarherps.org

The Society for the Study of Amphibians and Reptiles, the largest international herpetological society, is a not-for-profit organization established to advance research, conservation, and education concerning amphibians and reptiles. Founded in 1958, SSAR is widely recognized today as having the most diverse society-sponsored program of services and publications for herpetologists. Membership is open to anyone with an interest in herpetology—professionals and serious amateurs alike—who wish to join with us to advance the goals of the Society.

All members of the SSAR are entitled to vote by mail ballot for Society officers, which allows overseas members to participate in

determining the Society's activities; also, many international members attend the annual meetings and serve on editorial boards and committees.

All members and institutions receive the Society's primary technical publication, the *Journal of Herpetology*; and its bulletin, *Herpetological Review*; both are published four times per year. Members also receive pre-publication discounts on other Society publications, which are advertised in *Herpetological Review*.

To join SSAR or to renew your membership, please visit the secure online SSAR membership website via this link:

INFORMATION FOR CONTRIBUTORS

Herpetological Review is a peer-reviewed quarterly that publishes, in English, articles and notes concerning the study of amphibians and reptiles, as well as book reviews, commentaries, regional and international herpetological society news, and letters from readers directed to the field of herpetology. Articles reporting the results of experimental research, descriptions of new taxa, or taxonomic revisions are not published in *HR*, but should be submitted to the *Journal of Herpetology* (for information, please refer to: <http://www.ssarherps.org/pages/JHinstr.php>). To submit a manuscript to *HR*, please consult the SSAR webpage at:

<http://ssarherps.org/publications/journals/herpetological-review/>

REPRINTS AND PAGE PROOFS

Page proofs are sent electronically to authors of all articles, book reviews, and obituaries, but are not prepared for natural history, geographic distribution, or herpetoculture notes. Proofs are sent as pdf files approximately 2–4 weeks prior to publication. High resolution electronic (pdf) reprints of notes, articles, book reviews, and obituaries are provided at no charge to the primary/corresponding author as a benefit of SSAR membership. Reprint files will normally be sent prior to the issue mailing date from the printer. Authors who are not current SSAR members may purchase pdf reprints from the SSAR Publications Office.

ADVERTISING

Herpetological Review accepts commercial advertising. Rates and copy information are available from the SSAR web page (<http://www.ssarherps.org/pages/HRinfo.php>).

Herpetological Review (ISSN: 0018-084X) is published quarterly (March, June, September, and December) by the Society for the Study of Amphibians and Reptiles at the Department of Natural Sciences, 56 McClellan Dr, Walnut Ridge, AR 72476, USA, P.O. Box 3692. Periodicals postage paid at Walnut Ridge, AR 72476 and at additional mailing offices. All rights reserved. No part of this periodical may be reproduced without written permission of the Editor, except that authors and their agents are permitted to reproduce and distribute their own articles and notes. **POSTMASTER:** Send address changes to *Herpetological Review*, c/o Christy Classi, CAE, Society for the Study of Amphibians and Reptiles, PO Box 4022, Topeka, KS 66604, USA. **MISSING OR DAMAGED ISSUE?** Please notify Christy Classi (e-mail: cclassi@ssarherps.org) for a replacement.

Published by Society for the Study of Amphibians and Reptiles. USPS Publication no. 013-039. Printed by Allen Press, Inc., Lawrence, Kansas.

SSAR PUBLICATIONS

SSAR publishes seven different series: *Journal of Herpetology*, *Herpetological Review*, *Facsimile Reprints in Herpetology*, *Contributions to Herpetology*, *Herpetological Circulars*, *Herpetological Conservation*, and the *Catalogue of American Amphibians and Reptiles* (see below for CAAR details). SSAR members receive pre-publication discounts on all *Facsimiles* and *Circulars* and on volumes in the *Contributions* and *Herpetological Conservation* series. A complete pricelist of Society publications is available at: <http://www.ssarbooks.com/>.

CATALOGUE OF AMERICAN AMPHIBIANS AND REPTILES

The *Catalogue* consists of individual accounts of species and genera prepared by specialists, including synonymy, definition, distribution map, and comprehensive list of literature for each taxon. The accounts cover amphibians and reptiles of the entire Western Hemisphere. As of 2014, SSAR has made all CAAR accounts OPEN ACCESS as a service to the herpetological community. Over 900 accounts have been issued to date. To access individual accounts, visit <https://repositories.lib.utexas.edu/handle/2152/44116>.
